

Patent Claims

1. Preparation which can be administered orally and contains a fixed combination of at least one locally acting analgesic with a rapid onset of action (element A) with at least one systemically acting analgesic with a sustained action (element B).
2. Preparation according to Claim 1, characterized in that the active substance employed as element A shows an optimal duration of action of from 0.5 to 120 minutes, and the active substance employed as element B has an action of from 15 minutes up to 24 hours.
3. Preparation according to Claim 1, characterized in that elements A and B are selected so that the fixed combination has a duration of action of from 2 minutes up to 12 hours.
4. Process for producing a preparation according to Claim 1, characterized in that the fixed combination of an active substance of element A and an active substance of element B are converted together with conventional ancillary substances and carriers and, where appropriate, other compatible active substances into a suitable administration form.
